

REMco Profile

REMco - Rock Engineered Machinery Company is a California Corporation based in Livermore, California USA that was founded by machinery and rock processing professionals in 1982. It is now a leader in fine reduction technology and know-how. REMco manufactures the broadest line of fully autogenous rock-on-rock VSI crushers for the reduction of hard, abrasive rocks and ores. REMco also offers rock-on-anvil type VSI machines for limestone and less aggressive materials. REMco VSI Crushers in both anvil and rock-on-rock design are available in drive powers from 50 hp to 1,500 hp and with production rates to over 1,000 tons per hour.

REMco machines serve the needs of the construction materials, mining and industrial minerals producers as well as the growing recycling industry. The materials produced by REMco machines are high quality cubical, well graded, sound mid-range aggregates, specification sands and other fine sizes. The REMco VSI crusher product line and fine crushing technology is now available globally with the onset of the manufacture of REMco VSI crushers in South America, Asia and India in addition to the US production at REMco's California headquarters.

At REMco, we understand that size reduction equipment generates revenue for its owner, our customer. Our crushers are designed using top quality materials, the latest design techniques and we provide the best possible technical support to achieve customer satisfaction and attain the lowest crushing cost per product ton. REMco is unique by guaranteeing the performance of its machines. We serve many markets, all requiring fine products. One of the most important is producing manufactured sand. This is a REMco specialty as part of REMco's fine crushing engineered systems. By specializing in this high demand fine aggregate market REMco SandMax VSI crushers are integrated into systems that are environmentally sound and power efficient. This is a tough assignment when the final product must meet stringent gradings specs. as well as high rates of production at low cost.

REMco offers the latest in crusher performance remote monitoring with its SmartBox System that provides real-time data while the crusher is operating. The SmartBox System makes a REMco crusher the only crusher that can think and talk.

By proving their performance and reliability to the diverse industrial minerals industries, REMco crushers have set the production standard for low cost crushing in the refractory, chemical and roofing granules industries. Another area of REMco specialty is the recycling of glass waste such as cullet, auto and plate glass for recycling to the glass furnace. REMco GlassMax crushers are the leading machines in both the US and Europe. For more information on REMco products, please contact REMco.
